Because gold is about \$1,500.00 per oz [2011] the true value of the dollar today is 1½¢ our present market prices are set at .04¢ while the value of the dollar tumbles it will find bottom when it reaches 1½¢ at which point everything we buy today will be twice as much considering the value of the dollar is ½ as much. This will cause a collapse of the economy, a collapse that will make the Great Depression look like a walk in the park. This can happen at any moment.
