Alternative Cancer Test... Simple, Easy and Safe.

In his brilliantly researched 1974 book World Without Cancer, researcher and author G. Edward Griffin explains the trophoblastic theory of cancer proposed by Professor John Beard of Edinburgh University, which states that certain pre-embryonic cells in pregnancy differ in no discernible way from highly-malignant cancer cells. Edward Griffin continues:

"The trophoblast in pregnancy indeed does exhibit all the classical characteristics of cancer. It spreads and multiplies rapidly as it eats its way into the uterus wall preparing a place where the embryo can attach itself for maternal protection and nourishment."

The trophoblast is formed in a chain reaction by another cell that Griffin simplifies down to the 'total life' cell, which has the total capacity to evolve into any organ or tissue, or a complete embryo. When the total life cell is triggered into producing trophoblast by contact with the hormone estrogen, present in both males and females, one of two different things happens. In the case of pregnancy the result is conventional development of a placenta and umbilical cord. If the trophoblast is triggered as part of a healing process however, the result is cancer or, as Edward Griffin cautions: "To be more accurate, we should say it is cancer if the healing process is not terminated upon completion of its task."

Stunning proof of this claim is readily available. All trophoblast cells produce a unique hormone called the chorionic gonadotrophic (CGH) which is easily detected in urine. Thus if a person is either pregnant or has cancer, a simple CGH pregnancy test should confirm either or both. It does, with an accuracy of better than 92% in all cases. If the urine sample shows positive it means either normal pregnancy or abnormal malignant cancer. Griffin notes: "If the patient is a woman, she either is pregnant or has cancer. If he is a man, cancer can be the only cause." So why all of the expensive, dangerous biopsies carried to 'detect' cancerous growths? One can only assume that medicare pays doctors a larger fee for biopsies than pregnancy tests.

Many physicians are convinced that any cutting into a malignant tumor, even for a biopsy, increases the likelihood that the tumor will spread. If you are about to have surgery, or even a biopsy, where the cancer cells are going to be disturbed, it is imperative that you take vitamin B17 to kill the remaining...
free cells. Vitamin B17 can only help and will definitely not hurt.

**If you do NOT have Cancer**

As a preventative Dr. Krebs asserts that 7 to 10 apricot seeds per day will make it nearly impossible to develop cancer in one's lifetime. For optimum effect, the apricot seeds should be chewed raw and pulped in the mouth before swallowing. They should NOT be swallowed whole. One or two vitamin B17 tablets (100 mg) is an acceptable supplemental dosage per day. Also, if you eat three apples a day, seeds and all, the seeds in the three apples are sufficient vitamin B17, that's about 90 apples per month. The apricot seeds should be taken throughout the day (not all at once), with at least one hour in between each serving. A good rule-of-thumb: "Don't eat more seeds at one time than you likely would consume if you were eating the whole fruit."

If you are really serious about your health... We suggest: Apricot seeds (whole food is best) or vitamin B17 (100 mg) along with digestive enzymes with at least 3 mg Chymotrypsin, if these proteolytic enzymes are to be used as a digestive aid the recommended dosage is 1 or 2 tablets just prior to a meal. The proteolytic enzymes should also be taken on an empty stomach or 2 hours after meals, for the benefits are many. They should NOT be chewed or crushed, because of stomach acid. Drink plenty of room temperature high pH spring or mineral water. Finally, to maintain health, the diet should consist of 60% alkaline forming foods and 40% acid forming foods. A list of Acid / Alkaline Forming Foods... [Click Here]

Balancing the pH is a major step toward well-being and greater health. The body has to have a balanced pH like most living things on earth or it does not function correctly. The alkaline level is very important because research has already proven that disease cannot survive in an alkaline state and yet they thrive in an acidic environment. Understanding pH Level... [Click Here]

"My people are destroyed for lack of knowledge: Hosea 4:6"

**Doctors and Clinics**

Vitamin B17 may help prevent cancer, but if one already has cancer, a complete protocol is required including diet, enzymes, exercise, detoxification, and supplementation, as prescribed by a physician. It is best to work with an alternative physician to be sure you are using the best approach to treat your particular condition. These doctors and clinics are offering Laetrile / B17 as part of their therapy. Get your doctor to work with you — not on you.

**Body Detoxification** *Chapter IV* One Answer to Cancer

**CAUTION:** In reality, a person very rarely dies of cancer. It is always starvation and toxicity. As the malignant tumor grows it gives off waste products, which must be eliminated through the colon, liver, kidneys, lungs and skin. These waste products accumulate and gradually overburden the body. Most persons then die of toxemia. Before any disease can be cured, the waste products and impurities must be cleansed from the body. The sooner this is done, the sooner the body can begin repairing itself.

The "detoxer" must be prepared to accept that there will be a "healing crisis." While on a cleanse the body will purge. The release of toxins will bring up physical and emotional trauma that will be reflected in certain symptoms. A healing crisis can last a few days and produce these symptoms: fever, headaches and other aches, fatigue, skin eruptions, emotional irritability, gas, temporary constipation or diarrhea, temporary loss of menstruation, yawning, and muscular tension. In most cases, it is important not to use drugs to suppress these symptoms, but instead, to encourage the release of toxins from the body. These symptoms are an expression of release and must come out.

**Small Intestine Cleanse...** [Click Here] | **Liver / Gallbladder Cleanse...** [Click Here]

Dr. Kelley recommends that you begin the detoxification process even before you have the nutritional
IF YOU HAVE CANCER

"If you have Cancer, the most important single consideration is to get the maximum amount of Vitamin B17 into your body in the shortest period of time. This is secondary to the medical skill involved in administering it, which is relatively minimal." - Ernest T. Krebs, Jr.

**Vitamin B17 (laetrile - amygdalin) 500 mg:** Two (2) of these tablets, three (3) times daily. This is non-toxic, however you may get very nauseous and have gastric upset if you start out with the full amount. The tablet size is 500 mg. If you have difficulty in swallowing, the tablets may be broken up and added to soft food. You have to decide whether to have an empty stomach or not. After the initial 60 days of this amount of vitamin B17 a maintenance dose of 3 tablets per day for the following six months to a year is recommended according to the severity of the cancer. If the cancer had metastasised, take three tablets a day for life. It is in Dr. Krebs opinion (the vitamin B17 discoverer) to take three tablets daily for life even if the cancer hadn't spread.

For prevention of cancer and the maintenance of remission there is nothing as effective as laetrile or vitamin B17. Its non-toxicity permits its use indefinitely in the prevention of relapses and the prevention of metastases. Surgery, Radiation and Chemotherapy can only be administered for a limited time, afterwards patients are left without any protection.

For the apricot seeds and/or tablets (start out with a low dosage and build up). It is okay if you cannot handle the full dosages that we speak of - use Ginger tea to stop upsets. Some patients (according to the severity) take up to eighteen 500 mg tablets per day for the first month.

**Importance of Zinc:** Zinc is the transportation mechanism for laetrile and nitrilosides in the body. Biochemists and researchers have found that you can give Laetrile to a patient until its coming out of the ears of the patient, but, if that patient did not have sufficient level of Zinc, none of the laetrile would get into the tissues of the body. They also found that nothing heals within the body without sufficient Vitamin C. They also found that magnesium, selenium, vitamin A, and B all played an important part in maintaining the body's defence mechanism. This is why its very important to understand that cancer is best treated with a total nutritional program consisting of diet, vitamins, minerals, laetrile, and pancreatic enzymes.

The RDA for zinc is 15 mg per day. If you're already taking a multimineral supplement, you're probably already getting adequate zinc and copper. Do not take more than 50 milligrams per day and do not supplement zinc without supplementing copper (ratio of 8:1).

In general, high-protein (Acid Forming Foods) are good sources of zinc. Fruits and vegetables (Alkaline Forming Foods) are not generally good sources of zinc. Best Source Foods for Zinc

**Vitamin B17 Along With:**
-
Apricot Seeds, Digestive Enzymes, Okra-Pepsin-E3, and Coral Calcium.

**Apricot Seeds** (also called Kernels or Pits)

Many people take Laetrile / B17 in its natural state: bitter almonds or apricot seeds. And many of these people end up in the emergency wards nearly poisoned to death. This is because they are not following the directions, or taking the seeds without any supervision. The apricot seeds contain cyanide. Although Laetrile / B17 is less toxic than sugar and 21 times less toxic than aspirin, you can take too much... Unfortunately, you can take too much of anything, even water. So to question the use...
of vitamin B17 on the grounds of toxicity is extraordinary as all the drugs used currently in orthodox
cancer therapy are extremely toxic. Now, here is the irony of all of this. Milligram for milligram, the
chemotherapeutic agents which are commonly used in the treatment of cancer today, are hundreds of
times more toxic than laetrile. Nuff said...

Here is how it works: Cancer loves sugar. The sugar in the apricot seeds surrounds cyanide. The
cancer draws in the sugar, eats it, and releases the cyanide at the cancer cell and only at the cancer
cell; sort of like a smart bomb. The cancerous cells are destroyed, but normal cells are not affected.
This whole process is known as selective toxicity. Only the cancer cells are specifically targeted and
destroyed. The problem with this is that some people take too much. While others take enough, but
also have a diet high in sugar. Simply put: you must stop all sugar consumption, cut back drastically
on carbohydrates, and then take your apricot seeds. Otherwise, you can do your body a great
disservice, and not do anything to battle your cancer.

Suggested Dosage:
Apricot seeds and other nitrilosides such as wheat grass and millet. Apricot seeds should be ground
up in everything you eat. Anywhere up to 70 seeds per day. The FDA recommend not to ingest more
than 6 seeds per hour because toxic reactions may occur, such as gastric upset, headache, vomiting
and loose bowels. Many people take 15 seeds per day. Can skip a day and then take 40 the next day,
and so on and so on. Bone cancer survivors take 5 seeds per waking hour with pancreatic enzymes,
etc... ( I'm sure not e v e r y hour ). In general, eat one apricot seed for every 5 pound of body weight,
daily. Example: 180 lbs. = 36 apricot seeds daily.

Dr. Krebs recommends 30 to 35 seeds per day as nutritional support for clinical cancer sufferers. To
start, it is recommended that along with the purified forms of B-17, either intravenous or oral, cancer
patients eat one apricot seed for every 10 lb. of body weight, at least one hour in between each
serving. If this dosage is tolerated well, it may be increased to 30 to 35 kernels per day.

If you are using the 500 mg tablets of vitamin B17, the effect is magnified if you eat 5 - 7 apricot seeds
with it because the other vitamins, minerals, and enzymes in the seeds complement the vitamin,
thereby will help the actual vitamin B17 tablet assimilate into the body. If both laetrile and kernels are
taken, then Dr. Krebs recommends that there should be two hours between taking them. While high
doses of laetrile are taken, the number of kernels taken can be less.

Shred these seeds and sprinkle them on hot vegetables, baked potatoes, soup, salads, cereals, and
trail mix. Others, who do not mind the bitter taste of the seeds, prefer to eat them on their own. For
optimum effect, the apricot seeds should be chewed raw and pulped in the mouth before swallowing.
They should NOT be swallowed whole. Foods containing B17...

"And God said, Behold, I have given you every herb bearing seed, which is upon the face of all
the earth, and every tree, in the which is the fruit of a tree yielding seed; to you it shall be for
meat. Genesis 1:29"

Digestive Enzymes  Fluoride is a destroyer of enzymes... Click Here  Note: Potatoes are high
in carbohydrates which turns into glucose ( sugar ), use sparingly.

Several researchers including Dr. John Beard, Dr. Ernst Krebs, Jr., and Dr. Dean Burk found that the
cancer cell is coated with a protein lining and that it is this protein lining ( or covering ) that prevents the
body's normal defenses from getting to the cancer cell. They found that, if you can dissolve the protein
lining from around the cancer cell, the body's normal defenses, the leukocytes ( white blood cells ), will
destroy the cancer cell.

The body uses pancreatin, a secretion from the pancreas to dissolve the cancer cells. As we age, the
pancreas is less and less able to make this important substance. By taking pancreatin orally, it is
possible to increase the levels of its active ingredients in the blood, thereby helping the body break
down the cancer cells and remove them from circulation. Pancreatin as a digestive enzyme is
available from any health food store in the country, however this type of pancreatin is useless for the
cancer patient. The active ingredients in pancreatin which have shown to have tumor dissolving
abilities are trypsin and chymotrypsin.
Here is how it works: Proteolytic (protein-digesting enzymes), produced by the pancreas, thus also called pancreatic enzymes. The pancreatic enzymes will be the front line defense against cancer with the vitamin B17 as your back-up. These two enzymes, trypsin and chymotrypsin, are essential to the body's fight against cancer. They are the cancer patients best friend, they eat away and dissolve the protein coating of the cancer cell making it easier for the vitamin B17 and your natural white (killer) blood cells to completely destroy the cancer cells.

**Suggested Dosage:** 3 to 6 tablets with at least 20 mg Chymotrypsin each tablet, three or four times daily on an empty stomach or 2 hours after meals. They should NOT be chewed or crushed, because of stomach acid. If you have difficulty in swallowing, try adding the tablets to soft food, soup, etc. and swallow whole. Use little food as possible. You need the pancreatic enzymes to digest the protein coating around the cancer cell, not to digest your food. When all the enzymes are used up digesting food, there are none left to destroy cancer cells.

For systemic use the dosages vary depending on the severity of the condition, but the proteolytic enzyme tablets should be used as far as meals as possible... One or two tablets can also be taken with meals to aid digestion and reduce toxic undigested food. Again, very important, be sure the pancreatic enzymes that you buy each tablet have at least 20 mg Chymotrypsin, more is better. If you take a lower-strength formulation, you will need a higher dosage.

Also, fresh pineapple and papaya are good sources of enzymes that aids in digestion by breaking down protein. It's a very common practice to consume half a pineapple a day when taking B-17 therapy. Enzyme bromelain obtained from pineapples and enzyme papain obtained from papaya. Go to and read... Cancer Treatment with Enzyme Therapy... Click Here

[People with allergies to beef, pork, pineapples, and papaya may suffer allergic reactions to enzyme supplements. Tablets are often coated to prevent them from breaking down in the stomach, and shouldn't be chewed or crushed.]

**Okra-Pepsin-E3**  (Cleansing The Small Intestine)

It digests the mucus that coats the walls of many people's small intestine. Certain foods, such as pasteurized milk and many cooked foods, cause the mucus buildup on the wall of the small intestine (raw foods do not cause this mucus buildup). A person with a severe mucus buildup could take $1,000.00 worth of supplements a month along with a good diet and still get almost no nutritional value from them.

If capsules are taken for a few days to several weeks, one after each meal (reduce the amount of capsules if diarrhea occurs), the mucus will gradually be digested. The blood can then receive more nutrients from the food, even if it is from a poor diet. Then, once a year, take the Okra-Pepsin-E3 capsules again for a few days or a week to keep the mucus from building back up.

The Okra is a very sticky, gooey, vegetable material. It tends to stick the Pepsin enzyme to the mucus on the intestinal wall long enough to digest some of the mucus. The E-3 is a powerful tissue repair factor. It was originally developed for the patient with stomach ulcers or colitis.

**Coral Calcium**  (1100 mg capsules 90 ct. bottle)

Dr. Otto Warburg established long ago in his Nobel prize winning studies that cancer cannot grow in an alkaline environment because there is too much oxygen. Acidity drives oxygen out providing an environment in which cancer can grow. The best way to raise body pH is making sure that adequate minerals, particularly calcium are present. In general, green vegetables are high in calcium. Kale, broccoli, and collard greens are good sources of calcium, buy a juicer and start juicing. Non-dairy Calcium Foods... Click Here

As the bio-available calcium and other alkalizing minerals get into the blood and cells the body pH begins to return to the normal slightly alkaline level. Most disease thrives in an acidic environment. Maintaining a healthy blood pH (7.35 - 7.45) may help in the recovery from a degenerative disease and equality important, sickness and disease has difficulty ever getting started in an alkaline terrain. At
a pH slightly above 7.4 cancer cells become dormant and at pH 8.5 cancer cells will die while healthy cells will live.

**Suggested Dosage:** 2 capsules 4 times daily... Your body absorbs calcium less efficiently as your intake increases, therefore it is best to take calcium in small doses throughout the day. It is much easier for your body to absorb the calcium (actual calcium content), if no more than 500 mg is taken at one time. This is why it is recommended to drink quality water with ionic coral calcium throughout the day, as opposed to all at once.

*“For the life of the flesh is in the blood: Leviticus 17:11”*

**Conclusion... The Bottom Line**

There are two factors that are ALWAYS present with cancer no matter what else may be present. Those two factors are **Acid pH** and **Lack of Oxygen**. Those two factors always have to be present for cancer to develop and make tumor cells thrive. The body must be restored to a normal, slightly alkaline pH and one must eat the apricot seeds along with digestive / pancreatic enzymes with at least 20 mg Chymotrypsin, more is better. All else is additional, but important. It is best to work with an alternative physician to be sure you are using the best approach to treat your particular condition. Doctors and Clinics that offer B17 as part of their therapy... [Click Here]

**We suggest for existing cancer the following:**

**Existing Combo Package:** 30 Day Supply... Stay on this dosage for 60 days.

- Two pound of Apricot Seeds - 40 to 45 seeds daily. Build up to this dosage slowly.
- (2 bottles) Vitamin B17 500 mg (100 tablets) - 2 tablets 3 times daily.
- (2 bottles) Omnizyme Forte (200 tablets) - 4 tablets 3 times daily, on empty stomach.
- Okra-Pepsin-E3 (150 capsules) - 2 capsules, after each meal.
- (3 bottles) Coral Calcium (1100 mg capsules 90 ct. bottle) - 2 capsules 4 times daily.
- This helps detox the body of cancer waste products; impurities and helps raise body pH. Drink ½ gal. of high pH spring or mineral water daily. Your best choice is a combination of water and fresh vegetable juices, one quart of each daily. (Buy a juicer and start juicing.)

[If you have congestive heart failure or kidney disease, or if you are taking diuretics, talk to your doctor before increasing your water and/or juice intake.]

**CAUTION:** One must carefully follow the detoxification process after the supplements begin stimulating the release of wastes and debris. Start out with a low dosage and build up. If you take too much too quickly, the waste products and poisons must exit the body and may overload your elimination system and this can be serious. Allow your organs time to remove this debris from your body. Build up your dosage slowly and your body will thank you for it.

**How to Order...** [Click Here] (USA and International Orders)

**Maintenance Dose... After the initial 60 days**

**Maintenance Dose Combo:** One Month Supply... For 6 months to a year.

- One pound of Apricot Seeds - 20 to 25 seeds daily.
- Vitamin B17 500 mg (100 tablets) - 1 tablet 3 times daily.
- Omnizyme Forte (200 tablets) - 2 tablets 3 times daily, on empty stomach.
- Coral Calcium (1100 mg capsules 90 ct. bottle) - 1 capsule 3 times daily, after meal.
Here Is A More Powerful Anti-Cancer Protocol For Terminal Malignancy

This is an ideal therapy for anyone with terminal malignancy. If you know someone who has been told get your affairs in order you only have 3 to 6 months to live that person will have a reasonable chance of recovery if they add cesium and other key nutrients to the above supplements. They may need to take 6 grams of cesium daily to recover. Other cancer patients who have not lost their appetites and are eating normally can also benefit from this powerful protocol, just leave out the cesium part or give cesium a try with the minimum dosage of 1 gram three times daily with observation for signs of recovery (receding tumor masses). It is important to be sure to balance the intake of cesium and potassium. This protocol should be effective for all forms of cancer. Fruits, vegetables, supplementation, and detoxification are key. To get started... Click Here

Note: Daily doses of cesium accumulate in the body. The toxic dose for CsCl is 135 g.

How To Prevent The Spread of Cancer

One mechanism that cancer cells use to expand in the body is through digesting their surroundings. This mechanism was described by Dr. Matthius Rath in his book on cancer. Cancer cells produce and secrete millions of enzyme molecules, which, like scissors, cut collagen and tissue that surrounds cells. Cancer cells use these enzymes to cut little holes in the blood vessel wall and get into the bloodstream where they can travel to other organs, such as the lungs. Using the same mechanism, cancer cells can settle there and start new tumor growth. This stage, called metastasis, is the most dangerous stage of cancer. If a tumor stays in one place it rarely endangers our life. But about 90% of cancer deaths are the result of metastases, when a tumor invades various organs in the body.

It must be natural mechanisms that keep cells in place and prevent the spread of cancer. Dr. Rath suggested that our bodies can use lysine, a natural amino acid, to block the action of collagen digesting enzymes. Research has shown that a combination of vitamin C with the natural amino-acids lysine, proline, and specific extracts from green tea can block the invasion of cancer cells. Lysine, like vitamin C, cannot be produced in our body. We can only get it from our diet, therefore, deficiency of lysine is likely. This means that our body's ability to control collagen digestion can be compromised if intake of lysine is too low. Food sources of lysine are numerous, but the richest sources include cheese, eggs, fish, lima beans, milk, potatoes, pork, poultry, red meat, soy products, yeast, all protein-rich foods. Vegetables are generally a poor source of lysine, with the exception of beans, peas, and lentils. Source Foods for Vitamin C

Dr. Rath uses the nutrient combination of vitamin C, the amino-acids L-lysine and L-proline, and Epigallocatechin Gallate (EGCG - a polyphenol extract from green tea) and has found these to be very effective in the treatment of a wide variety of human cancers, including those of the skin, liver, breast, prostate, colon, lung, and brain. There is no reason why they should not also be effective in the treatment of Soft Tissue Sarcoma. More good news... These same nutrients and same doses (see below) work well with cardiovascular disease, by clearing arteries of plaque. This nutrient combination will help in preventing and reversing both cancer and heart disease. As a preventive measure against cancer, heart attack and stroke cut dosage (below) by 70% or 50% for those with family history of cancer, heart attack or stroke which are considered high risk.

We believe that the daily doses used by Dr. Rath and his team in the treatment of cancer are in the region of 6g (6000 mg) of vitamin C, 6g (6000 mg) of L-lysine, 3g (3000 mg) of L-proline and 1g (6000 mg) of EGCG.
1000 mg of EGCG. A high-dose multivitamin and mineral supplement would also be a good idea. Product choice is "Epican Forte" by Dr. Rath. To find a store that carries Dr. Rath's products... Click Here — Go to and read... Cancer Can Be Beaten by Matthius Rath, M.D. Also see, Heart Formula - Dr. Rath's anti-cancer protocol (minus green tea)... Click Here. With Heart Technology Formula there are No Pills! Just mix in 8 ounces of water or juice. You need to order Green Tea to take with Heart Technology Formula... Click Here or do internet search.

Note: The beneficial effects is reportedly much more pronounced and immediate when sugar and refined carbohydrates is eliminated. Sugar feeds cancer and sugar can crowd out vitamin C.

The Tumor Doesn't Disappear

How is success against cancer measured? Is it the length of life? The quality of life? The feeling of well-being and absence of pain? The ability to function normally on a daily basis? All of these are the criteria used by doctors who apply nutritional therapy. They are not concerned with the size of a tumor because they know most tumors are a mixture of malignant and benign cells. Orthodox medicine, on the other hand, is totally focussed on the tumor ( in cancers where tumors are formed ). A living and healthy patient with a tumor reduced by only 15% but stable would be classified as a failure, whereas a sick and dying patient with a tumor reduced 60% would be a success.

Hundreds of people make the wrong decisions because they were expecting their tumor to disappear. The tumor doesn't disappear. When the tumor shrinks down that's it, start rejoicing and continue on your natural regimen. Most doctors will still see a tumor and continue to give a person chemotherapy ( until they're dead ) in attempts to make the tumor disappear. Malignant (cancerous) tumors are only a small percent cancer and when the cancer part starts dying off, the tumor only shrinks down the percent that the tumor was cancerous.

In other words, if a kidney tumor is 10 percent cancerous the tumor will shrink down only 10 percent. So, if you get a CAT scan, which one should never get (with 6 CAT scans there is over 60% more of a chance of one developing Leukemia; MRI's are much safer as they use magnetic imaging and not radiation) a 10 percent shrinkage can be concluded as "NO CHANGE".

In general, if the tumor is easily accessible and if the patient wishes to do so, have the tumor removed. By removing the tumor the body has one less thing with which to cope. If the tumor is remote, not causing any problem and the patient agrees, leave the tumor alone. The tumor is merely a symptom, not a cause. If you take care of the body, the body will take care of the tumor. That doesn't mean that the tumor will go away, but it is unlikely to cause a problem.

Do NOT stop eating the apricot seeds along with digestive / pancreatic enzymes and one must maintain the body at a normal, slightly alkaline pH - 7.35 to 7.45. The ideal pH for blood is 7.4

Combined Medical Treatment

There are no contraindications to the use of Vitamin B17 nor any of these products along with surgery, radiation, and chemotherapy. Surgery, for example, is often life saving in cancer by correcting blockages, repairing fistulas, arresting haemorrhages, and removing cancerous growths that are impinging upon vital organs.

A patient on chemo, experiences significantly less side effects from chemotherapy, if patient simultaneously uses the therapies mentioned. Example: Enzymes reduce the side effects of chemo by eliminating the dead cells and the chemicals from the body. Also you would recover faster from chemo. When the body is getting rid of chemicals from chemo you would sweat a lot.

Several studies conducted by European scientists show that oral pancreatic enzymes taken with chemotherapy and radiation improves the response rate and reduces the side effects significantly.

Alkalinity Nutritional Program
Fruits, vegetables, and supplementation are key. Eating the normal western diet is a recipe for disaster for the cancer patient. Poor nutrition provides a favorable environment for cancer to grow and develop. Proper nutrition supports the immune system, starves cancer cells, and helps maintain the body at a normal, slightly alkaline pH - 7.35 to 7.45. Disease cannot survive in an oxygen rich alkaline state. The only place in your body where there is no oxygen is the cancer site. The best way to raise body pH is making sure that adequate minerals, particularly calcium are present. In general, green vegetables are high in calcium. One of the quickest ways to raise your body pH is to take in green vegetable juices. Kale, broccoli, and collard greens are good sources of calcium, buy a juicer and start juicing. The juicer is the most important appliance in the kitchen for the cancer patient. To battle cancer with fasting the best choice is a combination of water fasting and juice fasting using 2 - 5 glasses of juice per day. Non-dairy Calcium Foods More Information on Fighting Cancer With Juice Fasting... Click Here

So if we are going to purchase a juicer, should we buy a centrifugal or a mastication-type juicer? At the Gerson Clinic in Mexico, they are healing the "incurables" (lung cancer, lupus, spreading melanoma, lymphoma, brain cancer, breast cancer, multiple sclerosis, migraines, etc.) through the use of freshly-extracted raw vegetable juices. These people at the Gerson Clinic are the most knowledgeable people we know to ask what kind of juicer works best. So what do they teach? They teach that only mastication-type juicers will do the job because centrifugal juicers leave most of the nutrients in the pulp, which then gets thrown away. (The laboratory report where they ran five pounds of carrots through a centrifugal juicer and a mastication-type juicer, and the mastication-type juicer removed three to four times more nutrients than the centrifugal). The mastication-type juicer leaves very few nutrients in the pulp. For this reason, we recommend only mastication juicers for the cancer patient.

The Cancer Killer

1 beet - 1 carrot - 1 celery stick - ½ potato - 1 radish

Rudolf Breuss's, anticancer mixture has helped thousands of suffering people. This juice blend, during fasting, exerts a death blow on cancer. This was attested by over 24,000 patients who wrote him describing relief from their diseases. His patients were given small amounts of this juice over 42 days. A tea composed of nettle, St. John's wart, marigold, artemisi, and monarda was also given. By "starving out" the cancer, Rudolf Breuss reported a 96% success rate for the thousands of patients he treated over 30 years of practice. Rudolf Breuss died in 1989 at 93 years of age. Composition: 55% beet root, 20% celery root, 20% carrot, 3% potato, 2% radish.

The cancer patient will want to give up cooked and commercially produced meat such as beef, pork, lamb and fowl immediately (except for raw liver). Cooked meat is harmful for the cancer patient, as the very same enzymes used in its digestion (Trypsin and Chymotrypsin) are needed for fighting and digesting the cancer. When all the bodies reserves of these two enzymes are used up, there are none left in the blood to destroy cancer cells. All natural, self-made enzymes your body can produce should be used to fight the cancer. Plus, animal protein is Acid Forming. Go to and read... * Chapter V * Metabolic Cancer Cure Diet by Dr. William Kelley

Sugar Feeds Cancer... You want to take away the single fuel on which cancer thrives, SUGAR! Glucose (sugar) is the only form of fuel that cancer can utilize. Also, Sugar is Extremely Acid Forming - pH 5.0 to 5.5. Cancer loves cooked foods and cancer loves sugar. When one has cancer and eats something loaded with sugar it's just like throwing a cup of gasoline on a smoldering fire. Very simply put: You must stop all sugar consumption and one must cut back drastically on carbohydrates. If you hate your cancer, then starve it. The quest is not to eliminate carbohydrates from the diet, but rather to control blood sugar within a narrow range to help starve the cancer. Try to keep total carbohydrate count to under 75 grams per day, under 50 is ideal. These tools may help... Carbohydrate Count Carbohydrate Calculator

Carbohydrates are fiber or non-fiber. Fiber carbs are good for you, non-fiber carbs are bad for you. Carbs turn into glucose (sugar) in your blood and this sugar feeds cancer. Some foods high in carbohydrates are breads, cereals, grains, pasta, starchy vegetables (peas, corn, dried beans, potatoes), milk, yogurt and fruit. Balance your intake of these foods and eat these foods in moderation... Cancer patients need to eat more Fibrous carbs like cucumber, greens, tomato, broccoli, cauliflower, onions, snow peas, peppers, cabbage, asparagus, etc., these are great. Also, dry beans of all types are a good source of food for the cancer patient, and may be used two or three times a week
at anytime of the day. Carb count - ½ cup cooked about 20 grams.

**The Very Best Foods**

( Juiced, raw or steamed vegetables would provide the best nutrient value.)

**Vegetables:** Avocado, beets, broccoli, brussel sprouts, cabbage, carrots, cauliflower, celery, chicory, chives, collard greens, cucumbers, dandelion, endive, fennel, garlic, kale, leeks, lettuce, sea lettuce, mustard greens, nettles, okra, onions, parsley, parsnips, radishes, spinach, squash, tomatoes, turnips, and watercress.

**Fruits:** Apples, apricots, avocado, bananas, berries, cantaloupe, cherries, cranberries, currants, dates, figs, grapefruit, grapes (seeded), lemons, limes, mangos, melons, nectarines, olives, oranges, papayas, peaches, pears, persimmons, pineapples, plums, pomegranate, and quinces.

**Seeds and Nuts:** Almonds, beechnuts, black walnuts, butternuts, coconuts, english walnuts, filberts, pecans, pignolias (pine nuts), and pumpkin seeds.

It is BEST to take nothing into the body that has been cooked or processed: Avoid sugar, beer, sodas, ice cream, fried foods, table salt (sea salt - okay). The diet should focus on fruit (fresh pineapples), vegetables and high pH spring or mineral water. Drink plenty of room temperature spring or mineral water. To be safe, we recommend less fruit, more vegetables, and no refined sugars in the diet of cancer patients. To restore health, the diet should consist of 80% alkaline forming foods and 20% acid forming foods. A list of Acid / Alkaline Forming Foods... [Click Here]

**Summary:** The greener the vegetable the better.

"**A little wine should be used, as the Bible says:** 1 Timothy 5:23"  
( High quality red wine, no more than 4 oz. daily to build blood.)

Eat nuts, berries, seeds and every kind of herb you can get your hands on. Eat Ezekiel 4:9 bread. This bread can be found in the health food store under the name "Ezekiel 4.9 Bread". In Ezekiel 4:9, God gives the perfect recipe for making bread. B17 is found in small degrees in this bread. The Bible says that bread will make the heart strong. Foods containing B17... [Click Here]

**Increase Intake of Omega-3 Fatty Acids in Fish Oil to Fight Against Disease.** Reduce the amount of omega-6 fats and increase the amount of omega-3 fats. To do this you will need to avoid vegetable seed oils such as corn, cottonseed, sesame, safflower, sunflower, and partially hydrogenated soybean oil. Omega-3 fatty acids slow the growth rate of tumors significantly, or even decrease their size. Most people find that Carlson's Cod Liver Oil smells fresh and does not have a bad taste. They have a lemon-flavored product that tastes like lemon melted butter. More super foods... The following foods have the ability to help stave off cancer and some can even help inhibit cancer cell growth or reduce tumor size. Cancer Fighting Foods and Spices... [Click Here]

**What Omega-3 Can Do For You:** Lower triglycerides and raise HDL in the blood. Lower low density cholesterol in the blood. Greatly reduce risk of heart disease. Aid in regulation of blood sugar levels. Reduce rate of inflammatory diseases like arthritis, lupus, migraine headaches. Reduces platelet "stickiness" and therefore reduces the tendency towards atherosclerosis - the clogging up of the arteries with cholesterol plaque. Inhibits tumor growth and lowers cancer risk.

Most people recommend Carlson's Cod Liver Oil or Dale Alexander Fish Oils by Twinlab, they are found at many health food stores. With Cod Liver Oil you also get vitamin A and vitamin D. **Note:** Since Omega-3 fatty acids thins the blood, those taking blood thinners such as coumadin should only use fish oil under the supervision of a physician.

**WARNING:** **IF YOU ARE DRINKING DIET SODAS WHICH CONTAIN ASPARTAME OR USING SUGAR-FREE PRODUCTS - READ THIS!!** Diet sodas, foods labeled as "sugarless" "sugar free" "diet foods" "low calorie" and the like - You had better be careful and read the label to see if they contain ASPARTAME. Please check labels carefully Aspartame is poison and extremely acid forming. Take
the 60 day aspartame test. Give up all aspartame for 60 days and note the improvements in your health. Check it out... Do internet search on "aspartame and/or diet cola". [note in Australia (and UK) who just have numbers on things - not names - Aspartame is 951]

"Worship the Lord your God, and His blessing will be upon your food. Exodus 23:25"

Other Potent Cancer Fighting Products
We recommend adding these Cancer Fighters to your therapy.

**Cansema (8 fl. oz.) Liquid Tonic - (The paste is best for skin cancer)**
Only two teaspoons per day, on a full stomach. The Cansema paste actually pulls tumours out of the body. The liquid tonic is much more bearable than having a tumour ulcerate from the body while using the salve. Cansema kills the parasites (bugs in the blood) which damage cells turning them cancerous. It is a base or alkaline which takes away the acidity of the body, it is a very powerful treatment for cancer. This product is not, as a general rule, intended for long-term use. You want to use the product to specifically treat your problem and then discontinue use. We do NOT sell this product. To order Cansema... [Click Here] or do internet search.

**Oxygen Elements Plus - (formerly known as Hydroxygen Plus)**
A powerful free radical scavenger that helps your cells "breathe" better, while rapidly, deeply detoxifying. Just add drops to eight ounces of water or juice and take with or after meals. For a therapeutic dosage, increase slowly to 21 drops three times a day and maintain this amount for one to two months before dropping to the maintenance amount of 7 drops three times a day. We do NOT sell this product. To order this supplement... [Click Here] or do internet search.

**Cancer vs. Health... One Final Thought**

It is very important to understand that cancer is BEST treated with a total nutritional program consisting of diet, vitamins, minerals, laetrile, pancreatic enzymes, exercise, detoxification, and supplementation. Some of these supplements are widely available, others are not. If you have cancer, make sure you take enough of them. Generally 5 to 10 times the normal supplemental amounts seem to work best for food based supplements.

As you can see, this natural approach to cancer is based on making the body healthier. It works on reversing the basic conditions that allow cancer to develop. Strengthening a depleted, worn out, under energized immune system that is not capable of killing cancer cells faster than they are multiplying. And changing the internal body environment so that the cancer cells have a harder time surviving because the conditions that allow them to grow so prolifically have changed.

One final thing, too many people wait too long before getting started on safe and natural supplements for cancer or don't work up to using enough of whatever supplement they are taking and they don't make it. Fighting cancer can be a race with time if the cancer is pretty far along. No one knows the minimum amount needed to recover from cancer. The longer the time you have to experiment, the smaller amounts you can try at first. However, if one is seriously ill, it is better to err on the side of taking more than you may really need, because no one knows the minimum amount that is really needed and ones guess may be too little. Especially if chemo is effecting the body. Whole food supplements can't hurt you, they only help! And they don't make surgery, radiation, or chemotherapy less effective either, in fact it is quite the reverse. The nutritional benefits may vary from one person to another, but everyone will benefit.

**OPTIONAL... All Natural Cancer Therapy on 3.5" Floppy**

Yep, This All Natural Cancer Therapy web site is available for order on 3.5" Floppy Disk. Disk Includes: A neat little program of ALL of our informational WebSites. The program is simple and easy to use. If you like our websites, you will love this program. It's GREAT... Feel free to make copies to share with family and friends. The information contained could very well be a life saver. System Requirements: 3½ Floppy [A:] Drive. Only... $10.00 How to Order... [Click Here]
